

SCREEN READERS

CCC Confer supports users who have screen reader products such as JAWS, Narrator, etc.

The **Java Accessibility Bridge** allows these screen readers to provide verbal cues in the CCC Confer interface.

For Windows users:

Please download the Java Accessibility Bridge to your desktop using the link below. Double-click on the file to complete the installation. This will now allow your screen reader product to function in a CCC Confer meeting. <http://www.oracle.com/technetwork/java/javase/tech/jab-previous-releases-354403.html>

For Mac OS X users:

Java Accessibility Bridge is already pre-installed on your system with your version of Java.

For Additional Information:

See **Accessibility** document under **FEATURES** on our website.
